A REGULAR UPDATE ON WHAT'S HAPPENING IN THE WORLD OF FRUIT AND VEGETABLE PACKAGING AND HANDLING

edp® ELECTRO-BAGGER: AN INDUSTRY ICON ACCURATE, SPEEDY AND EASY TO OPERATE

Widely regarded as the most accurate conventional weighing bagger in the world edp's locally made 20kg Electro-Bagger has become the highest selling unit of its type in Australia. It has also generated huge sales overseas, particularly in the west coast of the U.S.A where it has become an industry icon and considered to be the best 50lb bagger for onions.

In September 2005 edp reached the milestone of 2,000 units sold worldwide. "Domestic sales of the edp Electro-Bagger are excellent" says edp's Managing Director, Ian Parsons. "Our export market to the U.S.A is strong and we are now also selling into Chile and Argentina."

"The edp Electro-Bagger has been a major contributor to our success" says Parsons. "It was one of the first major products that got us involved in fruit and vegetable packing in the early 1970s. It was first developed for filling onions into 18kg bags and then potatoes. Originally we manufactured the Electro-Bagger for the domestic market and

then our export markets started to grow."

"The edp Electro-Bagger is a highly developed and successful machine" says Parsons.

"We have constantly refined it over the last 30 years to meet industry needs. As new electronics become available we've upgraded the weighing on it."

"The machine is so popular because of its simplicity in operation, its accuracy and speed. Most of the major Australian exporters and domestic suppliers would use

the edp Electro-Bagger, some with several in each shed. It is a very common piece of equipment in most onion sheds in Australia."

The machine is fully mobile and has three-stage dual feed

belts, automatic bag changeover and no bag/no fill protection.

The edp® Electro-Bagger is accurate, speedy and easy to operate. It's as e-as-y as edp.
